

# How to Write an SOP that People will **ACTUALLY** Use

## 1 Ask: How is the Task Performed?

Talk to the people who **DO** the work

Watch for small steps, checks and every decision that happens

## 2 Capture the Details

Useful details = Important details

Who, What, When and How?

## Keep it Clear & Usable

Simple Language. Logical Order. Clear Steps and Responsibilities.

## 3

## 4 Include the WHY

The 'Why' helps turn a procedure into an understanding

## 6 Keep it **ALIVE**

SOP's should be **regularly reviewed & updated**

Not be something that's written once and forgotten

## Test before Finalising

## 5

☐ Can someone follow the SOP **without extra explanations?**

☐ Are any steps **unclear?**

☐ Does it reflect the **actual practice?**
